

# Planting

The landscape planting selection delivers a variety of colours, forms, textures and sizes. Species selection has considered drought resilience as well as the adjoining landscape environments which includes a combination of native and exotic species. Exotic species tie into the existing street trees and gardens of Campbell while native planting enhances the site and connects it to the surrounding Mt Pleasant Nature Reserve.

## Trees

## Hedges

## Shrubs

## Grasses

## Groundcover

## Climbers

## Proposed landscape layout - typical block
